

Date: 8/18/14

Odd Things:

1. Projector "C" blacked out several times when acquiring sources for projector "B" (I had Lect Computer 1 on "C" and a faculty's computer on "B" at the time and we both were using VGA inputs not HDMI)
2. At first Camera's 5 & 6 were non-responsive. Would not move at all. After almost giving up, they just spontaneously started to work. (Must try again later)
3. Just saw Protector "B" Blink out and I wasn't doing anything at the time. Lect. PC 1 vga was the source.

TPC = touch pad controls

1. TPC Stream feed either doesn't refresh or is extremely slow when switching sources.
2. Steaming feed often shows Loading... Then nothing
3. Reactivating TPC when the screen is black takes a long time. (about 2.55 sec. to light-up)
4. Audio/Mic controls, are very slow to respond the first time you use them then they work in real time. (after either TPC is booted or the Room is)
5. Lost audio function on TPC after logging into the Audia System. Had to reboot the TPC to regain those functions. The next several times I logged into the Audia, the TPC worked fine with no problems.

External Streaming

1. When changing out-going source for streaming feed within Tech Mode - The output streaming signal didn't refresh without requiring the streaming signal. Also it appears to freeze. (Must try in other locations, Might be an artifact of the net lines within 2103)
2. When selecting only one out-going signal, (ie. Steam 2.2 set to "None") then out-going stream is not full screen.

Buttons:

1. Both audio "Mutes" were "On" after room booted up. They must be Off when system is turned on.
2. Audio "Mute" buttons do not flash when item is muted.
3. Projector "Mute" buttons do not flash when item is muted.
4. Sometimes the Projector "Mutes" do not unmute when cycled to fast..
5. Button push seems hard and low.
6. The Light Blue/Blue contrast isn't clear when you push the button. Can we have either a different color on the flip or an audio beep or both.
7. Steam 2 and Steam 2.2 buttons do not show the correct source for Camera's 5 & 6
 - a. Camera 5 maps to Table 3 PC 2
 - b. Camera 6 maps to Camera 5

Table 2:

1. We lost controls to PC 1 & PC 2 on Table 2 by mid afternoon. TPC does not see the computers when plugged in. --- upon rebooting the TPC itself, the connection to table 2 was re-established. I did not need to reboot the room!!
2. Lan 1 & Lan 2 are wired wrong -- Opps I did that cart..
